

Tennessee law requires building owners and/or contractors to thoroughly inspect a facility or structure considered for demolition or renovation for asbestos-containing material (ACM). Those individuals inspecting a facility for ACM must be first accredited by Tennessee Department of Environment and Conservation (TDEC). Once the inspection has been completed a Notification of Asbestos Demolition or Renovation Application (Form CN-1055) must be submitted at least 10 working days prior to beginning work. Approval from TDEC must be received prior to issuance of a Demolition Permit. For additional information regarding this requirement or to obtain a copy of the Notification of Asbestos Demolition or Renovation Application (Form CN-1055) please use the following link:
