SEWER SERVICE SPECIFICATIONS

If it should be necessary to install a sewer service connection where a tee has not been provided, a new sanitary tee or tee wye with 45-degree bend must be installed on the main line for sewer service connection. New tee shall be installed using Max Adapter couplings, pvc slip couplings or approved equal. Max Adapter couplings are to be used when cutting into Clay, Ductile Iron or AC pipe. Sewer service shall be extended to the property line, right-of-way or easement line and shall have a 6-inch sanitary tee or tee wye with a 45-degree bend installed at the end. Riser pipe for clean out shall be 6 to 8 inches below grade and have a cap with threaded lid. Clean out will be covered with a plastic box with green sewer lid installed on it.

No saddles shall be attached to the main sewer for service connection unless approved by HUD.

NOTE: 90-DEGREE BENDS ARE NOT PERMITTED
